

To fairly balance load BH patients across the region, our HPD partners are asking the following of our hospitals.

1. Enter in EMResource (under ER status comment) current # BH patients/capacity for BH patients (ie. 0700 BH#4/8). This will be different at each facility, so your ER will need to determine what truly is your acceptable capacity out of the number of ER beds you have. We realize this is a complex ask but making your best guess is a starting point.
2. This status/comment will need to be updated at **7am, 3pm, and 11pm** (and any time you need to show capacity change).

ED Status: Emergency Department status

Auto-Open: Auto-change upon 4-hour status expiration

High Volume: High volumes, long wait times

No ED: This facility does not have an emergency department

Open: Open, no restrictions.

Saturation: Long wait times for most categories of patients, holding multiple admissions for > 6 hours

Comment:

0700 BH #4/8

HPD will make every effort to balance load BH patients based on the best information hospitals can provide.
